

MAKE TO ORDER

ABOUT US

ODS is a family business, a leader in the field of custom furniture started 40 years ago in the heart of Brianza. The company has grown over the years and now it has about forty employees and is structured in an area of 8000 square meters.

It is a specialized furniture company that plans and monitors the projects from the creation of the products to the on-site assembly, checking the production and all

the processes of the materials: brass, iron, copper, steel, zinc, aluminum, but also wood, glass, and marble. The company's flexibility allows us to address any kind of request like prototyping or making contract furnishings, for this reason, and thanks to the high-quality standards, the company boasts of local, national and international collaborations in cruising, luxury retail, hospitality and residences fields.

ENGINEERING

From the conception to the creation: we have a highly efficient engineering department responsible for designing the products from the customer's concept and the architectural plan to the final product. We own a cutting-edge software able to

create 3D modeling in order to make the customers aware of the ultimate object. After this design stage, the office sends the project to the lab where takes place the actual making phase. This is where we create art.

PRODUCTION

The industrial processes take place in a single production site which is very automated but rests on the artisanal experience of the craftsmen built up over time. Every ODS product is a custom-made object, made to fit

every need and every requirement of the customer: there is a full range of services that follow the production from the beginning, as the architectural projects, to the finished product.

CRAFTSMANSHIP

ODS is born to create art, driven by the passion of transforming raw material into artifacts able to bring joy and harmony. Our philosophy is based on the constant stimulus that drives the creation of unique

architectural solutions, of a home-made quality.

What we do is not just what we do, but what we are.

CATAPHORESIS - GALVANIC BATHS

We fully support the artisanal production process, for this reason, we have many specialized baths to coat materials with different techniques: gold baths, copper plating, galvanizing, chrome and nickel plating

onto any metallic surface. We want to supervise and take care of every part of the process in order to create a unique object for our customers.

FOLDING

The folding technique was first developed and used for artworks or jewelry and over time it was applied to many different types of works. Our passion that we put in every project, and our experience with materials, led us to the development of a new technique that allows us to carve sharp edges on ferrous materials.

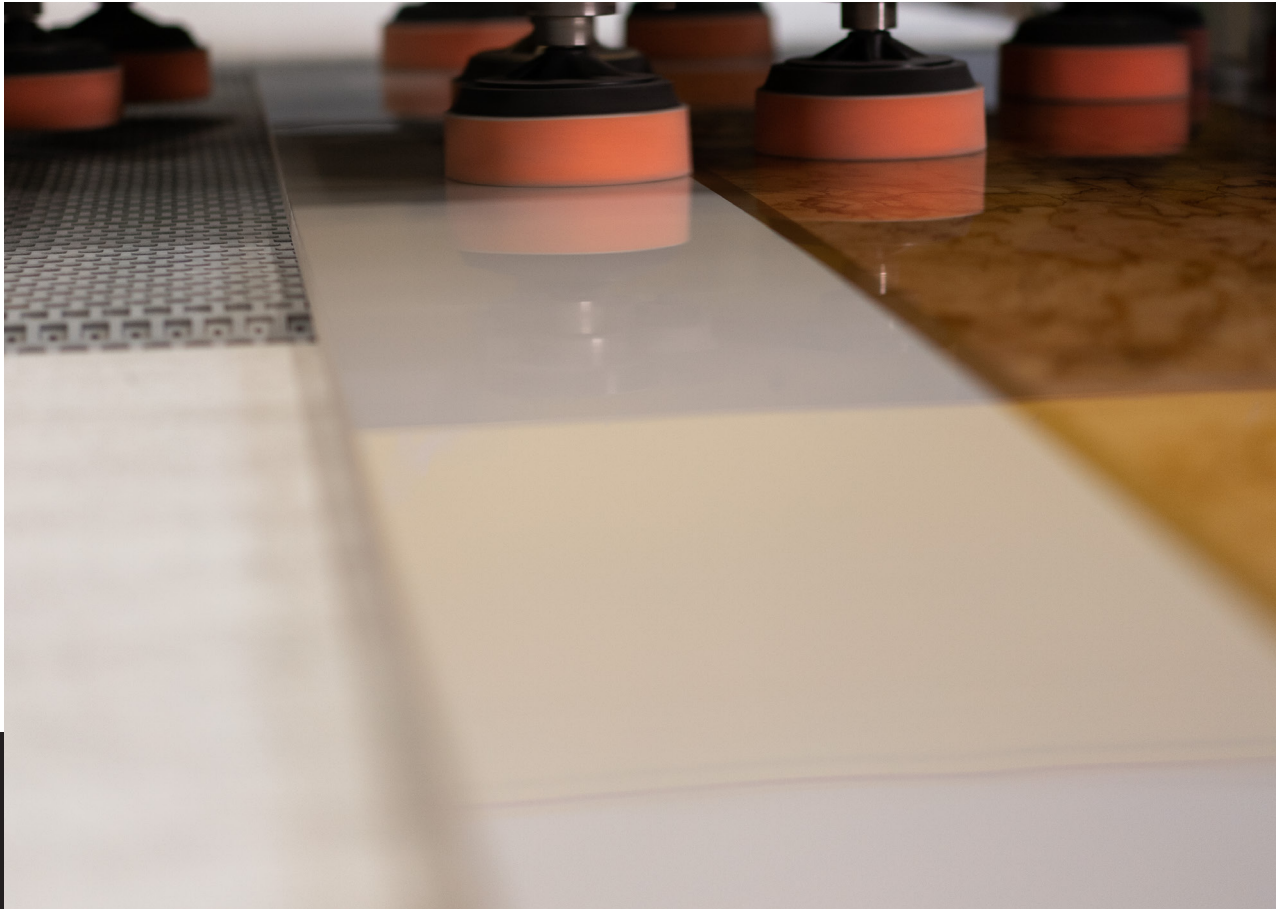

This new technique can be applied to brass, iron, stainless steel, aluminum, copper and any other alloy or plastic material. This system allows us to apply our folding technique up to a length of 6 meters and a width of 2 meters. We challenge limits and overcome challenges.

LACQUER - 3D PRINTING

All our painting rooms are equipped with vacuum systems with special filters that can eliminate all kinds of fine dust that could compromise the final product. We use a lot of different color charts to produce our collection of samples and we use high-quality paints that last in time, to keep the original color alive and to maintain excellent standards. The DIP-PRINT technology is the flagship of the company: it is very versatile and it can be used in many areas since it can fix several painting issues on three dimensional surfaces made of plastic, metal, wood and many other materials. It uses the water pressure to set the paint on the materials, the pattern adheres perfectly to the object maintaining the original motif, even in the case of particularly complex textures.

EPOXY RESIN - GEL COAT

The two-component transparent epoxy resin allows making many surfaces made of wood, marble, stone or plastic, very resistant. This waterproof coating comes from very strict requirements and it was

made to protect objects in very hostile environments like hulls for wooden boats and outdoors furniture.

WORKING PROCESS

We monitor every single step of the artisanal production, from the selection of the material, like metal, wood, glass or marble, to the on-site assembly, thanks our solid collaborations with other companies.

Every ODS product is a custom-made piece, specially designed for our clients, made to suit every need and request. We don't have our own catalog since we like to fully meet

the wishes of our customers, in order to produce unique art products every time we work on a project.

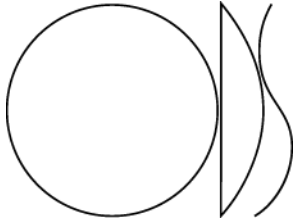

One of the many services we propose is the developing of a complete mock-up of the room that will be furnished: we create a full custom project which includes the furniture arrangement of the whole space, studying everything in detail to fit every need of the customer.

ECO-FRIENDLY

We are aware of the rules and we are proud of our eco-friendly company. We follow all the environmental standards because we care about the ecological issues, for this reason we chose to be a sustainable firm, reducing the environmental impacts for

example using the DIP-PRINT system, a technology that allows us to make zero waste. This technology has a minimal environmental impact because it does not produce waste and also because the water is reused for several work sessions.

ODS is the ambassador of premium Italian style
and proudly manufactures 100% in Italy.
